

WEED MANAGEMENT IN HORTICULTURAL CROPS

RESEARCH RESULTS 2010

Doug Doohan
Tim Koch

Department of Horticulture and Crop Science
The Ohio State University
Ohio Agricultural Research and Development Center
Ohio State Extension

This report contains the results of research on horticultural crop weed management in Ohio for 2010. This report and other resources are available on the Internet at: www.oardc.ohio-state.edu/weedworkshop

This bulletin does not constitute endorsement or specific recommendations. Apology is expressed for any inadvertent errors found in this report.

Final copies of commercial advertisement that will contain data from these results are subject to the author's approval before publication.

All publications of the Ohio Agricultural Research and Development Center are available to clientele without regard to race, color, creed, religion, sexual orientation, national origin, gender, age, disability or Vietnam-era veteran status.

TABLE OF CONTENTS

| | |
|---|-----|
| Acknowledgements..... | iii |
| Bayer Crop and Rating Codes..... | v |
| Weed List and Codes..... | vii |
| Chemical and Adjuvant List..... | ix |
| Precipitation and Temperature 2009 | xi |
| Precipitation and Temperature 2010 | xiv |
| Apples – Effect of Matrix Timing on Weed Control..... | 1 |
| Apples – Weed Control and Crop Tolerance with Indaziflam..... | 16 |
| Apples – Weed Control and Crop Tolerance with Treevix and Sinbar | 32 |
| Broccoli – Effect of 2, 4-D and Dicamba Simulated Drift | 44 |
| Cauliflower – Weed Control and Crop Tolerance with Pendimethalin | 58 |
| Green Onions – Marsh Yellowcress Control | 65 |
| Green Onions – Weed Control and Crop Tolerance with Pendimethalin | 69 |
| Hickory – Stump Sprout Control Using MAT28 with Escort and Arsenal | 76 |
| Lettuce – Alternatives to Kerb | 82 |
| Marsh Yellowcress – Controlling a New Weed Species Threatening Ohio Vegetable Farms | 88 |
| Peppers – Effect of 2, 4-D and Dicamba Simulated Drift | 91 |
| Pumpkins – Crop Tolerance with PRE and POST Herbicides | 106 |
| Raspberries, Red – Weed Control with Fall Applied Matrix, Sinbar, and Drive..... | 116 |
| Sweet Corn – Late Emerging Annual Grass Control..... | 124 |
| Tomatoes – Effect of 2, 4-D and Dicamba Simulated Drift | 136 |
| Tomatoes – Weed Control and Crop Tolerance with Matrix and Pruvin | 178 |
| Tomatoes – Weed Control and Crop Tolerance with Reflex | 189 |

ACKNOWLEDGEMENTS

Special acknowledgement and thanks are due to the following individuals who made this work a success:

Experiment Stations

Richard L. Callendar and Staff - **Muck Crops Agric. Res. Station, Willard**
Matt Hofelich and Staff - **North Central Agric. Res. Station, Fremont**
Bruce Williams and Staff - **Dept. Farm Manager, OARDC/OSU**
Lynn F. Ault and Staff - **Dept. Farm Manager, OARDC/OSU**

Research Associate

Timothy A. Koch

Graduate Student

Linjian Jiang

Summer Student Assistants

Stephen Witten
Ben Morpew
Connie Echaiz
Mabel Barinas

Special acknowledgement and thanks are due to the following companies for their support of the Fruit and Vegetable Weed Research Program, Department of Horticulture and Crop Science, OARDC/The Ohio State University.

American Berry Cooperative

AMVAC

BASF Ag Products

Bayer CropScience

Buurma Farms, Inc.

Dow AgroSciences LLC

E.I. du Pont de Nemours and Company

IR-4 Program

John F. Stambaugh & Co.

K.W. Zellers & Son Inc.

Makhteshim Agan of North America

Maurer Farms

Mid America Food Processors Association

Moreland Fruit Farm

Nourse Farms, Inc.

OARDC Research Enhancement Program – Competitive Grants

Ohio Dept. of Agriculture, Specialty Crop Block Grant Program

Ohio Vegetable & Small Fruit Research & Development Program

Rispens Seeds, Inc.

Rupp Seeds, Inc.

Seedway, LLC

Siegers Seed Co.

Syngenta Crop Protection, Inc.

Tessenderlo Kerley, Inc.

Wiers Farm Inc.

Zellers Farms, Inc.

A LIST OF CROP BAYER CODES USED IN THIS REPORT:

ALLCE = Green Onion
BRSOA = Kale
BRSOB = Cauliflower
BRSOK = Broccoli
CUUSS = Pumpkin
CYAOV = Shagbark Hickory
CYPAN = Bell Pepper
LACSA = Lettuce
LYPES = Tomato
MABSD = Apple
RUBID = Red Raspberry
RUBOC = Black Raspberry
RUBSG = Brambles; (raspberries and blackberries)
VACMY = Blackberry
ZEAMX = Sweet Corn
* not official Bayer Code.

A LIST OF ABBREVIATIONS AND DEFINITIONS USED IN THIS REPORT:

AVE = Average
BURN = Necrotic tissue
CHLOROSIS = Yellow coloration or bleaching of foliage
CM = Centimeter
CONTROL = Herbicide efficacy
DAT= Days after treatment
DOR = Dormant
DIAM = Diameter
GROWTH = Annual increase in length of shoot
INJURY = Composite assessment of stunting, chlorosis, and other visible effects
MKTB = Marketable fruit
MOSAT = Months after treatment
MSP = Mid-spring
NO = Number
OZ = Ounces
POST = Post emergent application
POSTTP = Post-transplant
PRE = Pre emergent application
PRETP = Pre-transplant
RACOB = Randomized Complete Block Design
STEM TWIST = Distorted main stem caused by herbicide injury
STUNT = Reduction in height or growth
UNMKTB = Unmarketable fruit; green (tomatoes), diseased or cull
VEGETAT = Vegetative
WAFLUT = Weeks after flowering of the untreated control
WAT = Weeks after treatment

METHODS OF ASSESSING CROP INJURY, WEED CONTROL, AND DENSITY:

Unless otherwise stated, crop injury and weed control were assessed visually. The 0-100 linear scale was used, in which 0 = no crop injury/no control, and 100 = death of crop/complete weed control.

For weed density: LOW = Scattered, just a few weeds

MEDIUM = 1 weed per 3 feet of row

HIGH = More than 1 weed per 3 feet of row

A LIST OF WEEDS WITH BAYER CODES USED IN THIS REPORT:

| BAYER CODE | COMMON NAME | BOTANICAL NAME |
|------------|-------------------------|---|
| ABUTH | velvetleaf | <i>Abutilon theophrasti</i> Medicus |
| ACCVI | Virginia copperleaf | <i>Acalypha virginica</i> L. |
| AGRASS* | foxtail, crabgrass spp. | <i>Setaria, Digitaria</i> spp. |
| AGGRE | quackgrass | <i>Elytrigia repens</i> (L.) Nevski |
| AMABL | prostrate pigweed | <i>Amaranthus blitoides</i> S. Wats. |
| AMARE | redroot pigweed | <i>Amaranthus retroflexus</i> L. |
| AMAXX | pigweed spp. | <i>Amaranthus</i> spp. |
| AMBEL | common ragweed | <i>Ambrosia artemisiifolia</i> L. |
| AMBTR | giant ragweed | <i>Ambrosia trifida</i> L. |
| CAGSE | hedge bindweed | <i>Calystegia sepium</i> (L.) R. Br. |
| CAPBP | shepherd's purse | <i>Capsella bursa-pastoris</i> (L.) Medicus |
| CARHI | hairy bittercress | <i>Cardamine pratensis</i> L. |
| CERVU | mouseear chickweed | <i>Cerastium vulgatum</i> L. |
| CHEAL | common lambsquarters | <i>Chenopodium album</i> L. |
| CIRAR | Canada thistle | <i>Cirsium arvense</i> (L.) Scop. |
| CYAOV | Shagbark hickory | <i>Carya ovata</i> (MILL) K.KOCH |
| CYPES | yellow nutsedge | <i>Cyperus esculentes</i> L. |
| DACGL | orchardgrass | <i>Dactylis glomerata</i> L. |
| DAUCA | wild carrot | <i>Daucus carota</i> L. |
| DIGSA | large crabgrass | <i>Digitaria sanguinalis</i> (L.) Scop. |
| GLEHE | ground ivy | <i>Glechoma hederacea</i> L. |
| MALNE | common mallow | <i>Malva neglecta</i> Wallr. |
| OXAST | yellow woodsorrel | <i>Oxalis stricta</i> L. |
| PANDI | fall panicum | <i>Panicum dichotomiflorum</i> Michx. |
| PLALA | buckhorn plantain | <i>Plantago lanceolata</i> L. |
| PLAMA | broadleaf plantain | <i>Plantago major</i> L. |
| POANN | annual bluegrass | <i>Poa annua</i> L. |
| POLPY | Pennsylvania smartweed | <i>Polygonum pennsylvanicum</i> L. |
| POROL | common purslane | <i>Portulaca oleracea</i> L. |
| PRTQU | Virginia creeper | <i>Parthenocissus quinquefolia</i> (L.) Planch. |
| RORIS | marsh yellowcress | <i>Rorippa islandica</i> L. |

| | | |
|-------|--------------------------|---|
| RUBFR | bramble | <i>Rubus fruticosus</i> L. |
| RUMOB | broadleaf dock | <i>Rumex obtusifolius</i> L. |
| SETFA | giant foxtail | <i>Setaria faberii</i> L. |
| SENVU | common groundsel | <i>Senecio vulgaris</i> L. |
| SOLPT | Eastern black nightshade | <i>Solanum ptycanthum</i> Dun. |
| SOOCA | Canada goldenrod | <i>Solidago canadensis</i> L. |
| STEME | common chickweed | <i>Stellaria media</i> (L.) Vill |
| TAROF | dandelion | <i>Taraxacum officinale</i> Weber in Wiggers |
| TOXRA | poison ivy | <i>Toxicodendron radicans</i> (L.) Ktze. |
| TRFPR | red clover | <i>Trifolium pratense</i> L. |
| TRFRE | white clover | <i>Trifolium repens</i> L. |

* not official Bayer Code.

HERBICIDE LIST

| TRADE NAME | COMMON NAME | FORMULATION | MANUFACTURER |
|------------------------|--------------------------------------|-------------|-----------------------------------|
| Accent Q | nicosulfuron | 54.5 WDG | DuPont Crop Protection |
| Arsenal | Isopropylamine salt of imazapyr | 28.7 EC | BASF Ag Products |
| Atrazine | atrazine | 4L | Syngenta Crop Protection, Inc. |
| Bicep 11 Magnum | s-metolachlor+ atrazine + safener | 5.5L | Syngenta Crop Protection, Inc. |
| Chateau | flumioxazin | 51 WDG | Valent U.S.A. Corp. Agr. Products |
| Clarity | dicamba | 4L | BASF Ag Products |
| Command | clomozone | 3L | FMC |
| Degree Extra | acetochlor+ atrazine + safener | 4L | Monsanto Company |
| Drive | quinclorac | 75 DF | BASF Ag Products |
| Dual Magnum | s-metolachlor | 7.62 EC | Syngenta Crop Protection, Inc. |
| Dual 11 Magnum | s-metolachlor + safener | 7.64 L | Syngenta Crop Protection, Inc. |
| Durango | glyphosate | 4 SL | Dow AgroSciences LLC |
| Escort | metsulfuron methyl | 60WG | DuPont Crop Protection |
| Garlon | triclopyr | 4EC | Dow AgroSciences LLC |
| Goaltender | oxyfluoren | 4 L | Dow AgroSciences LLC |
| Guardsman Max | Dimethenqamid-P+ atrazine | 5 L | BASF Ag Products |
| Impact | topramezone | 2.8 L | AMVAC |
| Indaziflan | indaziflan | 200 SC | Bayer CropScience |
| Karmex | diuron | 80 DF | Griffin LLC |
| Kerb | pronamide | 50 WP | Dow AgroSciences LLC |
| Krenite S | fosamine ammonium | 4L | DuPont Crop Protection |
| Laudis | tembotrione | 3.5L | Bayer CropScience |
| Lorox | linuron | 50 WP | Tessenderlo Kerley, Inc. |
| Lumax | s-metolachlor+ atrazine + mesotrione | 4L | Syngenta Crop Protection, Inc. |
| MAT-28 | N/A | 50 SG | DuPont Crop Protection |
| Matrix | rimsulfuron | 25 DF | DuPont Crop Protection |
| Milestone | aminopyralid | 2L | Dow AgroSciences LLC |
| Nortron | ethofumesate | 4L | Bayer CropScience |
| Option | foramsulfuron | 35% WDG | Bayer CropScience |
| Outlook | dimethenamid | 6 L | BASF Ag Products |
| Prowl H ₂ O | pendimethalin | 3.8 L | BASF Ag Products |
| Pruvin | rimsulfuron | 25DF | MANA |
| Reflex | fomesafen | 2L | Syngenta Crop Protection, Inc. |
| Rely | glufosinate ammonium | 200 SL | Bayer CropScience |
| Roundup W/M | glyphosate | 4.5 L | Monsanto Company |
| Sandea | halosulfuron-methyl | 75 DF | Gowan Company |
| Select | clethodim | 2 L | Valent U.S.A. Corp. Agr. Products |
| Sencor | metribuzin | 75 DF | Bayer CropScience |
| Sinbar | terbacil | 80 WP | Tessenderlo Kerley, Inc. |
| Spartan | sulfentrazone | 75 DF | FMC Corporation |
| Starane Ultra | fluroxypyr | 2.8 L | Dow AgroSciences LLC |
| Stinger | clopyralid | 3 L | Dow AgroSciences LLC |
| Strategy | ethalfluralin+clomozone | 2.1 L | Loveland Products, Inc. |
| Surflan | oryzalin | 4L | Dow AgroSciences LLC |
| Treevix | saflufenacil | 70 WG | BASF Ag Products |
| Weedar 64 | 2, 4 -D amine | 3.8L | NuFarm |

ADJUVANT LIST

| NAME | ABBREVIATION | DESCRIPTION |
|----------------------|--------------|-----------------------------|
| Ammonium sulfate | AMS | Spray grade fertilizer |
| Crop Oil Concentrate | COC | Paraffin base petroleum oil |
| Induce | NIS | Nonionic surfactant |
| MSO | MSO | Methylated seed oil |
| 28% N | UAN | Urea ammonia nitrate |

The Ohio State University

APPLES - EFFECT OF MATRIX TIMING ON WEED CONTROL

Trial ID: APPLIEFFMATTIMWC 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: To evaluate the efficacy of Matrix tank mixes on perennial and annual weed control when applied at two different spring timings: "dormant" and "mid-spring".

TRIAL SUMMARY: Treatments applied mid-spring (MSP) provided much better weed control compared to the dormant (DOR) applications. Control of wild carrot and buckhorn plantain was weak with the dormant treatments, but excellent with the mid-spring application. The Matrix/Karmex/Roundup/NIS tank mix was the best overall treatment. Virginia creeper was poorly controlled regardless of herbicide and timing.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Reliability: Reliable

Initiation Date: 3/31/2010

Planned Completion Date: 8/30/2010

CROP AND WEED DESCRIPTION

| Weed | Code | Common Name | Scientific Name |
|------|----------|------------------------|---|
| | 1 AMBEL | common ragweed | <i>Ambrosia artemisiifolia</i> L. |
| | 2 AMBTR | giant ragweed | <i>Ambrosia trifida</i> L. |
| | 3 DAUCA | wild carrot | <i>Daucus carota</i> L. |
| | 4 OXAST | yellow woodsorrel | <i>Oxalis stricta</i> L. |
| | 5 PLALA | buckhorn plantain | <i>Plantago lanceolata</i> L. |
| | 6 POLPY | Pennsylvania smartweed | <i>Polygonum pensylvanicum</i> L. |
| | 7 PRTQU | Virginia creeper | <i>Parthenocissus quinquefolia</i> (L.) |
| | 8 RUMOB | broadleaf dock | <i>Rumex obtusifolius</i> L. |
| | 9 SOOCA | Canada goldenrod | <i>Solidago canadensis</i> L. |
| | 10 TRFRE | white clover | <i>Trifolium repens</i> L. |

Crop 1: MABSD

Planting Date: 5/15/1998

Row Spacing: 15 FT

Apple

Variety: Jonathon

Planting Method: Conventional

Perennial Age: 12 years

SITE AND DESIGN

Plot Width, Unit: 12 FT

Site Type: Orchard

Tillage Type: None

Plot Length, Unit: 15 ft

Reps: 4

Study Design: RACOB

SOIL DESCRIPTION

% Sand: 16

% Silt: 72

% Clay: 12

% OM: 2.5

pH: 6

CEC: 14

Texture: Silt Loam

Soil Name: Wooster Silt Loam

Fert. Level: Moderate

TRIAL COMMENTS:

Visual observations were taken at 30, 60, 90, and 120 days after application. The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100= death of crop/ complete weed control. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot.

APPLES - WEED CONTROL AND CROP TOLERANCE WITH INDAZIFLAM

Trial ID: APPWCCT717 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: Compare indaziflam + glyphosate and indaziflam + glufosinate to current local practices for length of weed control and crop injury.

TRIAL SUMMARY: Herbicide treatments did not injure apple trees. Seventeen weeks after application, indaziflam/Rely 280 provided the best overall control. Possible antagonism of wild carrot control was observed when indaziflam was tank-mixed with glyphosate. Chateau did not control yellow wood sorrel.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 5/4/2010

Planned Completion Date: 9/15/10

CROP AND WEED DESCRIPTION

| Weed | Code | Common Name | Scientific Name |

| Propellant: | CO2 |

TRIAL COMMENTS:

Visual observations were taken at 1, 3, 6, 13 and 17 weeks after application. The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100= death of crop/ complete weed control. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot.

APPLES - WEED CONTROL AND CROP TOLERANCE WITH TREEVIX AND SINBAR

Trial ID: APPWCCTTREEVSINB 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: To evaluate longevity of POST herbicide treatments for orchard weed control.

TRIAL SUMMARY: At 120 days after treatment, the top treatment was Sinbar WDG at 2 lbs/A, with 96% or better control of 12 out of 13 weeds. The WDG formulation was by far superior to the WP formulation for grass control. Sinbar WP at 2 lbs/A, and Sinbar WP at 2 lbs/A + Roundup at 23.3 oz/A were next but were weaker on grasses.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 5/4/2010

Planned Completion Date: 10/15/2010

CROP AND WEED DESCRIPTION

| Weed | Code | Common Name | Scientific Name |
|------|----------|--------------------------|--|
| | 1 AGRASS | annual grasses (various) | <i>Setaria, Digitaria</i> spp. |
| | 2 AMBEL | common ragweed | <i>Ambrosia artemisiifolia</i> L. |
| | 3 AMBTR | giant ragweed | <i>Ambrosia trifida</i> L. |
| | 4 CARHI | hairy bittercress | <i>Cardamine pratensis</i> L. |
| | 5 DAUCA | wild carrot | <i>Daucus carota</i> L. |
| | 6 OXAST | yellow woodsorrel | <i>Oxalis stricta</i> L. |
| | 7 PLALA | buckhorn plantain | <i>Plantago lanceolata</i> L. |
| | 8 POLPY | Pennsylvania smartweed | <i>Polygonum penslyanicum</i> L. |
| | 9 RUMOB | broadleaf dock | <i>Rumex obtusifolius</i> L. |
| | 10 TAROF | dandelion | <i>Taraxacum officinale</i> Weber in Wiggers |
| | 11 TRFRE | white clover | <i>Trifolium repens</i> L. |
| | 12 ACCVI | Virginia copperleaf | <i>Acalypha virginica</i> L. |
| | 13 CYPES | yellow nutsedge | <i>Cyperus esculentes</i> L. |

Crop 1: MABSD

APPLE

Variety: Cortland

Planting Date: 5/15/1998

In Row Spacing: 20 FT

Row Spacing: 20 FT

Soil Temperature: 64.8 F

Planting Method: Conventional

Perennial Age: 12 YR

Soil Moisture: Normal

SITE AND DESIGN

Plot Width, Unit: 6 FT

Site Type: Orchard

Tillage Type: None

| Boom Height, Unit: | 18 IN |
| Ground Speed, Unit: | 3.2 MPH |
| Spray Volume, Unit: | 25 GPA |
| Propellant: | CO2 |

TRIAL COMMENTS:

The trial objective was to see what treatment offered the best long-term weed control. Visual observations were taken at 30, 60, 90, and 120 days after application. The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100 = death of crop/ complete weed control. For weed density: Low= occasional weed ; Medium = 3 weeds per square foot ; High = > 3 weeds per square foot.

BROCCOLI- EFFECT OF 2,4-D AND DICAMBA SIMULATED DRIFT

Trial ID: BROCHERBDRIFTW 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: Evaluate effect of 2, 4-D and dicamba simulated drift on processing broccoli.

TRIAL SUMMARY: All rates of 2, 4-D, dicamba, and the tank-mix of 2, 4-D with glyphosate injured broccoli. However, the crop recovered quickly except from the 1X rate of 2, 4-D. Dicamba reduced yield even though injury symptoms were no more severe than with 2, 4-D.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 6/21/2010

Planned Completion Date: 11/18/2010

CROP DESCRIPTION

Crop 1: BRSOK

Broccoli

Variety: Avenger

Planting Date: 6/21/2010

Planting Method: Machine Transplanted

Rate: 1 Plant/24"

Depth: 2 IN

Row Spacing: 5 FT

Spacing Within Row: 24 IN

Seed Bed: Conventional

Soil Moisture: Moist

SITE AND DESIGN

Plot Width, Unit: 3 FT

Plot Length, Unit: 25 FT

Site Type: Level Well Drained

Reps: 4

Tillage Type: Moldboard Plow

Study Design: RACOB

SOIL DESCRIPTION

% Sand: 16

% OM: 3.11

Texture: Silt Loam

% Silt: 72

pH: 6.7

Soil Name: Wooster Silt Loam

% Clay: 12

CEC: 8.5

Fert. Level: Moderate

APPLICATION DESCRIPTION

A

Application Date: 7/13/2010

Time of Day: 10-11 AM

Application Method: Spray

Application Timing: POST3WATP

Applic. Placement: Broadcast

Air Temp., Unit: 78.5 F

% Relative Humidity: 85.8

Wind Velocity, Unit: 2 MPH

Dew Presence (Y/N): N

Soil Moisture: Moist

% Cloud Cover: 30

| Propellant: | CO2 |

TRIAL COMMENTS:

Five consecutive plants per plot were selected for measurements and yield. Plant heights were taken in centimeters from the soil line to the growing tip inside the new leaves at 7, 14, and 28 days after treatment. The entire trial was harvested on 9/9/10, based on the visual maturity of the control plants. We took 2 diagonal measurements per head in centimeters; (Columns: 32,33, 36, 37, 40, 41, 44, 45, 48,49). The heads were graded according to the United States Department of Agriculture, "United States Standards for Grades of Broccoli for Processing.

CAULIFLOWER - WEED CONTROL AND CROP TOLERANCE WITH PENDIMETHALIN

IR-4 PR.NO: P6504

Trial ID: CAULWCCTPENDIF 2010

Location: Fremont

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: IR-4 has received a request for the minor use of Prowl H2O on cauliflower (06504) for control of weeds.

The purpose of this research is to collect performance data to support pesticide registration according to parameters outlined in the request.

TRIAL SUMMARY: Prowl H2O and Dual Magnum caused moderate but transient crop injury and did not affect crop yield parameters. Prowl H2O provided slightly better weed control than Dual Magnum.

TRIAL LOCATION

City: Fremont

State/Prov.: Ohio

Postal Code: 43420

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 5/27/2010

Planned Completion Date: 8/24/2010

CROP AND WEED DESCRIPTION

Weed

Code

- 1 AGRASS
- 2 AMABL

TRIAL COMMENTS

"Flamenco" was the processing cauliflower variety used in this trial with a 102 day maturity. Plants were greenhouse grown and transplanted to the field on 5/ 5/10. Herbicide treatments were applied by hand on 5/27/10 2 days after transplanting. Visual injury ratings (necrosis, chlorosis, epinasty) were taken on a 0-100 scale, with "0" representing no injury, and "100" representing crop death. Ratings were taken at 3, 7, 14, and 21 days after treatment. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot. The entire trial was harvested on 8/24/10 based on the visual maturity of the control plants. Cauliflower heads were measured in centimeters (CM), and weighed in pounds. Grades were based on the USDA "United States Standards for Grades of Cauliflower", and were: U.S # 1, (Grade #1); U.S Commercial, (Grade #2); and Unclassified, (Grade #3).

GREEN ONIONS - MARSH YELLOWCRESS CONTROL

Trial ID: GONIONMARYELLO 2010

Location: Willard, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: Evaluating promising marsh yellowcress control treatments for potential use in green onions.

TRIAL SUMMARY: Results indicate that Sencor at 0.25-0.50 lb/A had the best marsh yellowcress control with low crop injury in green onions. Other potential treatments include Lorox at 2 lb/A, and Chateau at 2 oz/A. This years' trial had excellent weed pressure, but no irrigation source; consequently the green onion stand was erratic.

TRIAL LOCATION

City: Willard

State/Prov.: Ohio

Postal Code: 44890

TRIAL COMMENTS:

This trial had high marsh yellowcress pressure but did not have irrigation potential, consequently the onion stand was erratic and no harvest was taken. It was possible, however to find similarities among treatments to get an idea of what the best potential treatments for onions would be. We hope to continue this trial on an irrigated site next year.

GREEN ONIONS - WEED CONTROL AND CROP TOLERANCE WITH PENDIMETHALIN

IR-4 PR. NO. : P5097

Trial ID: GRONWCCTPENDIM 2010

Location: Willard, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: IR-4 has received a request for the minor use of pendimethalin on green onions for control of weeds. The purpose of this research is to collect phytotoxicity data to support registration according to parameters outlined in the request.

TRIAL SUMMARY: Green onions were not injured by Prowl H2O and provided better yield than the untreated control except when used at the lowest rate of 1.05 qt/A. The split-application of Prowl H2O provided the best overall weed control and the highest total yield and average weight per plant.

GREEN ONIONS - WEED CONTROL AND CROP TOLERANCE WITH PENDIMETHALIN

IR-4 PR. NO. : P5097

Trial ID: GRONWCCTPENDIM 2010

Location: Willard, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

TRIAL COMMENTS:

The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100 = death of crop/ complete weed control. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot. All plots were hand weeded on 9/3/10 due to heavy weed pressure. The stunt seen on the untreated controls (3 & 6 WATPOST) was due to weed pressure. On 10/21/10, we harvested 3 linear feet of onions in the row center. We then counted the number of plants and took a fresh weight in kilograms. We also took photos to verify if there were any visual differences between treatments.

HICKORY - STUMP SPROUT CONTROL USING MAT28 WITH ESCORT AND ARSENAL

Trial ID: STSPCONTMAT28W0910

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: To evaluate rates of MAT28 in combination with Escort and Imazapyr for industrial rights - of - way and waxy leaf brush control.

TRIAL SUMMARY: Shagbark hickory stump sprouts were sprayed in summer 2009 and were periodically rated for degree of control. Listed below are the 5 most effective treatments. Rates are in oz/A, followed by % sprout kill one year after application.

- 1) MAT28 (9)/MSO; 98% sprout kill.
- 2) Milestone (3.3)/Roundup (52.4)/Arsenal (6.4)/NIS; 97% sprout kill.
- 3) MAT28 (9)/Escort (2.42)/MSO; 95% sprout kill.
- 4) MAT28 (9)/Escort (2.42)/Arsenal (25.2)/MSO; 92% sprout kill.
- 5) MAT28 (5.64)/Escort (1.5)/Arsenal (15.6)/MSO; 91% sprout kill.

The following treatments were significantly different from the 5 listed above: MAT28 (3.76)/Escort (1)/Arsenal (10.4)/MSO, and MAT28 (3.76)/Escort (1)/MSO.

TRIAL COMMENTS:

Hickories selected for the trial were vigorous stump sprouts, and were sprayed to runoff on 7/28/09. They were rated for percent defoliation at 45 and 90 days after treatment in 2009. They were rated again in the spring of 2010, commencing with the final 1 year after application rating on July 28, 2010.

LETTUCE - ALTERNATIVES TO KERB

Trial ID: LETTALTKERBM 2010

Location: Willard, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: To find an alternative to Kerb herbicide for lettuce.

TRIAL SUMMARY: This trial had high purslane and pigweed pressure. Kerb is very effective on purslane but weak on pigweed. Out of 11 treatments, the split applications of Prowl H2O+ Dual Magnum, and Dual Magnum (0.68+ 1.07 pt/A) have the most potential for a Kerb replacement. This takes into account crop injury, weed control, total yield and average head weight.

TRIAL LOCATION

City: Willard

State/Prov.: Ohio

Postal Code: 44890

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 8/2/2010

TRIAL COMMENTS:

Visual observations were taken 1, 2 and 3 weeks after the first application. The 0-100 linear scale was used in which 0 = 0 crop injury/no control, and 100 = death of crop/ complete weed control. For weed density, : LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot.

We harvested 10 linear feet of row (or PLOT) , counted the number of heads within that plot, and weighed them in pounds. We then randomly selected 5 heads, and measured the average (AVE) diameter in centimeters (CM).

MARSH YELLOWCRESS - CONTROLLING A NEW WEED SPECIES THREATENING OHIO FARMS

Trial ID: MYCNWSTOFM 2010

Location: Willard, Ohio

Study Dir.: Doug Doohan, Tim Koch, Connie Echaiz

Investigator: Doug Doohan

Objective: To evaluate PRE and POST herbicides for the control of marsh yellowcress, *Rorippa palustris*.

TRIAL SUMMARY: Twelve herbicides applied PRE were evaluated for marsh yellowcress control. The most promising herbicides were: Sencor, (100% control) ; Sandea, (93% control); Lorox, (80% control), and Chateau, (60% control).

TRIAL COMMENTS

Aristotle was the pepper variety used in the trial and had a 72 day maturity. Plants were greenhouse grown and were direct seeded into flats and kept in the greenhouse for about 6 weeks. They were transplanted to the field on 6/21/10. Prior to transplanting Dual Magnum at 1 pint/acre was applied broadcast for weed control. Visual injury ratings (necrosis, chlorosis, epinasty) were taken on a 0-100 scale, with 0 representing no injury, and 100 representing crop death). Herbicide treatments were applied by hand on 7/13/10, approximately 3 weeks after transplanting. Ratings were taken at 3, 7, 14 and 21 days after treatment. Plant heights in centimeters were taken from the soil line to the growing tip on 5 consecutive plants at 7, 14, and 28 days after treatment. We noticed that Clarity at 1/50X at 1 week after treatment had no growing point at all, though from a distance the plant looked fine. The trial was harvested 4 times on 8/27, 9/7, 9/17, and 10/19, based initially on the visual maturity of the control plants.

Grades were based on the USDA "United States Standards for Grades of Sweet Peppers", and were U.S. Fancy, U.S. # 1, and U.S.# 2 . Peppers were counted, seperated into respective grades, and weighed in ounces.

PUMPKINS - CROP TOLERANCE WITH PRE AND POST HERBICIDES

Trial ID: PUMPKINW 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan, Tim Koch, and Mabel Barinas

Investigator: Doug Doohan

Objective: To evaluate PRE and POST applied herbicides for weed control and crop tolerance in pumpkins.

TRIAL SUMMARY: Four herbicides were evaluated for crop tolerance, weed control, and total yield. Dual Magnum at 1.33 pts/A (PRE), and the split application of Strategy + Sandea (4 pt + 0.50 oz /A) POST provided the highest yield. Early significant plant injury was observed with Dual Magnum, (both rates), and Lorox (3#/A). A significant increase in pumpkin size over the untreated control was observed with Lorox at 3#/A.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Finalized

Trial Reliability: Reliable

Initiation Date: 6/17/2010

Planned Completion Date: 10/15/2010

CROP AND WEED DESCRIPTION

| Weed | Code | Common Name | Scientific Name |
|------|----------|-------------------------|-------------------------|
| | 1 AGRASS | foxtail, crabgrass spp. | Setaria, Digitaria spp. |
| | 2 AMAXX | pigweed spp. | Amaranthus spp. |
| | 3 CYPES | yellow nutsedge | Cyperus esculentes L. |
| | 4 POROL | common purslane | Portulaca oleracea L. |

Crop 1: CUUPE

Planting Date: 6/17/2010

Rate: 1 S/Row-FT

Row Spacing: 8 FT

Pumpkin

Variety: Neon

Planting Method: Hand-planted

Depth: 0.5 IN

Seed Bed: Smooth

SITE AND DESIGN

Plot Width, Unit: 7 FT

Site Type: Level Field

Tillage Type: No Till

Plot Length, Unit: 20 FT

Reps: 4

Study Design: RACOB

SOIL DESCRIPTION

% Sand: 16

% Silt: 72

% Clay: 12

% OM: 3.11

pH: 6.86

CEC: 8.5

Texture: Silt Loam

Soil Name: Wooster Silt Loam

Fert. Level: Moderate

APPLICATION DESCRIPTION

TRIAL COMMENTS:

The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100= death of crop/ complete weed control. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot. All treatments except the weed-free control had a PRE herbicide, and weed control was very good across the board. We harvested 5 plants per plot in the row center, and weighed them in pounds.

RASPBERRIES, RED - WEED CONTROL WITH FALL APPLIED MATRIX, SINBAR, AND DRIVE

Trial ID: RRWCFALLMSDW 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan, Tim Koch and Connie Echaiz

Investigator: Doug Doohan

Objective: To evaluate fall applied herbicides for crop injury and weed control.

TRIAL SUMMARY: Treatments were applied on 12/4/09. Plants were rated visually for crop injury and weed control in the spring of 2010. Matrix at 4 and 8 oz/A provided the best overall weed control at 4 and 5 months after application; however the high rate caused significant injury.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 12/4/2009

Planned Completion Date: 6/30/2010

CROP AND WEED DESCRIPTION

Weed

Code

- 1 AGGRE
- 2 CERVU
- 3 TAROF
- 4 GLEHE
- 5 CIRAR

Common Name

quackgrass
mouseear chickweed
dandelion
ground ivy
Canada thistle

Scientific Name

Elytrigia repens
Cerastium fontanum
Taraxacum officinale
Glechoma hederacea
Cirsium arvense

Crop 1: RUBID

Planting Date: 5/15/2007

Rate: 1 plant per 3 ft

Row Spacing: 10 FT

Perennial Age: 3 Years

Soil Temperature: 40.8 F

Red Raspberry

Variety: Encore

Planting Method: Hand-Planted

Depth: 6 IN

Spacing Within Row: 3 FT

Seed Bed: Smooth

Soil Moisture: Normal

SITE AND DESIGN

Plot Width, Unit: 6 FT

Site Type: Field

Tillage Type: Conventional

Plot Length, Unit: 20 FT

Reps: 3

Study Design: RACOB

SOIL DESCRIPTION

% Sand: 11

% Silt: 75

% Clay: 14

% OM: 3

pH: 6

CEC: 12

Texture: Silt Loam

Soil Name: Wooster Silt Loam

Fert. Level: Good

TRIAL COMMENTS

The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100 = death of crop/complete weed control. For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot.

SWEET CORN - LATE EMERGING ANNUAL GRASS CONTROL

Trial ID: SWCNLEAGC2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: To evaluate PRE and POST herbicides for control of late emerging annual grass in sweet corn.

TRIAL SUMMARY: This trial had 6 pre-emergence and 5 post-emergence treatments. The top 3 treatments for longevity of fall panicum control and crop safety were: Bicep 11 Magnum (1.6 qt) applied PRE, Dual Magnum (1.33 pt) + Atrazine (1 pt) applied PRE, and Accent Q (0.9 oz)+ MSO (2 pt)+ UAN (1.5 qt) applied POST.

TRIAL LOCATION

TRIAL COMMENTS:

Fall panicum was the predominant grass species. Sweet corn was not harvested.

Visual observations were taken at 1, 3, and 6 weeks after each application. The 0-100 linear scale was used, in which 0 = 0 crop injury/no control, and 100= death of crop/ complete weed control.

For weed density: LOW = occasional weed ; MEDIUM = 3 weeds per square foot ; HIGH = > 3 weeds per square foot.

TOMATOES - EFFECT OF 2,4-D AND DICAMBA SIMULATED DRIFT

Trial ID: TOM24DDICAMBA 2010

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: The objective of this experiment was to determine the impact of low rates of 2, 4-D and dicamba on processing tomatoes grown in Indiana and Ohio.

TRIAL SUMMARY: This trial had 2 varieties, H3402 and H9364. Two herbicides were used: 2,4-D (Weedar 64), and dicamba (Clarity). Rates used were 1/300, 1/100, and 1/30 of the standard field rate for soybeans for each chemical. There were 2 application timings: 2 weeks after transplant (2WATP), and 5 weeks after transplant (5WATP). Early drift caused more visible injury to the crop, but the plants recovered and yield was not affected. Later drift caused less noticeable symptoms but caused significant effect on yield. Dicamba is more injurious than 2, 4-D. Yield can be significantly reduced with as little as 1/30 of the field rate of these herbicides.

TRIAL LOCATION

City: Wooster

State/Prov.: OH

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 6/17/10

Planned Completion Date: 10/15/10

CROP AND WEED DESCRIPTION

Crop 1: LYPES

Processing Tomato

Planting Date: 6/9/2009

Rate: 1 Plant/18"

Row Spacing: 5 FT

Seed Bed: Conventional

Variety: H3402 & H9364

Planting Method: Machine Transplanted

TRIAL COMMENTS:

Column 27 refers to late bloom initiated by herbicide injury compared to the untreated control plots. Harvest timing was based on a minimum of 75% red fruit in the untreated controls. We harvested 5 plants per plot, sorted the fruit by color, and weighed the fruit in pounds. Harvest timing was good in that there were no rotten or cull fruit. We also took a 30 fruit (red) subsample to observe any differences in size among treatments.

TOMATOES - WEED CONTROL AND CROP TOLERANCE WITH MATRIX AND PRUVIN

Trial ID: TOMWCCTMATPRUVINW

Location: Wooster, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: Compare the efficacy of MANA rimsulfuron 25DF with Matrix 25DF on tomato, and determine injury potential of both products.

TRIAL SUMMARY: Pruvín and Matrix are 25% formulations of rimsulfuron. The 4 oz. rate of both herbicides caused slight crop stunting at 3 WAT. Yield with 1 oz Matrix PRE was lower than with all other treatments. Weed control was better with PRE treatments than with POST treatments; however, higher weed pressure in the POST treated plots did not result in yield reductions. Over the term of the experiment, differences in weed control, crop tolerance, and yield between treatments of the two herbicides were trivial.

TRIAL LOCATION

City: Wooster

State/Prov.: Ohio

Postal Code: 44691

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 6/7/10

CROP AND WEED DESCRIPTION

| Weed | Code | Common Name | Scientific Name |
|------|----------|--------------------------|------------------------------------|
| | 1 AGRASS | annual grass | <i>Setaria, Digitaria</i> spp. |
| | 2 AMBEL | common ragweed | <i>Ambrosia artimisiifolia</i> L. |
| | 3 CHEAL | common lambsquarters | <i>Chenopodium album</i> L. |
| | 4 POROL | common purslane | <i>Portulaca oleracea</i> L. |
| | 5 SOLPT | Eastern black nightshade | <i>Solanum elaeagnifolium</i> Dun. |

TRIAL COMMENTS:

Trial was sprayed with PRE treatments on 6/17/2010. A single variety was used this year, H3402. The tomato seedlings were transplanted on 6/18/2010. The POST application was applied on 7/13/10. Phyto and efficacy ratings were taken at 7, 21, and 42 days after each application. Weed control was evaluated by species at 14, 28, and 42 days after transplanting. The 0-100 linear scale was used, in which 0 = no crop injury/ no control and 100 = death of crop/complete weed control. For weed density LOW = scattered, just a few weeds; MEDIUM = 3 weed per linear foot of row; HIGH = more than 3 weeds per linear foot of row. Plots were hand harvested on 10/7/10 and 10/8/10. Yield results were based on 5 plants in the center of each plot. Yield data includes total plot weight of all fruit from 5 plants, a 30 fruit (mature) subsample, total marketable (red) per plot, total marketable in tons per acre, immature fruit (green), and cull fruit (rotten or diseased.)

TOMATOES - WEED CONTROL AND CROP TOLERANCE IN PROCESSING TOMATOES WITH REFLEX

Trial ID: TOMWCCTREFLEX 2010

Location: Fremont, Ohio

Study Dir.: Doug Doohan and Tim Koch

Investigator: Doug Doohan

Objective: Determine tomato tolerance of Reflex applied prior to transplanting compared to local herbicide standards, and evaluate efficacy of Reflex with and without Dual applied to tomato prior to transplanting compared to local herbicide.

TRIAL SUMMARY:

Reflex at 32 oz/A provided the maximum yield. The Dual Magnum /Reflex tank-mix at 16 fluid oz/A provided similar yield with better end-of-season annual grass control.

TRIAL LOCATION

City: Fremont

State: Ohio

Postal Code: 43420

Country: USA

Trial Status: Final

Trial Reliability: Reliable

Initiation Date: 5/27/2010

Planned Completion Date: 10/15/2010

CROP AND WEED DESCRIPTION

Weed

Code

1 AGRASS

2 POROL

Scientific Name

Setaria, Digitaria spp

Portulaca oleracea L.

Crop 1: LYPES

Planting Date: 6/3/2010

Rate: 1 Plant/18"

Row Spacing: 5 FT

Soil Moisture: Slightly Wet

Processing Tomato

Variety: OX 325

Planting Method: Machine

Depth: 2 IN

Seed Bed: Smooth

SITE AND DESIGN

Plot Width, Unit: 5 FT

Site Type: Field

Tillage Type: Conventional Till

Plot Length: 25 FT

Study Design: RACOB

SOIL DESCRIPTION

% Sand: 20

% Silt: 41

% Clay: 39

% OM: 4.4

pH: 6.6

CEC: 27

Texture: Silty Clay Loam

Soil Name: Hoytville

Fert. Level: Moderate

APPLICATION EQUIPMENT

| | |
|-----------------------|----------|
| | A |
| Appl. Equipment: | Backpack |
| Operating Pressure: | 40 PSI |
| Nozzle Type: | Flat Fan |
| Nozzle Size: | 8002VS |
| Nozzle Spacing, Unit: | 15 IN |
| Nozzles/Row: | 4 |
| Band Width, Unit: | 60 IN |
| Boom Height, Unit: | 18 IN |
| Ground Speed, Unit: | 2.65 MPH |
| Spray Volume, Unit: | 25 GPA |
| Propellant: | CO2 |

TRIAL COMMENTS:

Crop tolerance ratings were taken at 7, 14, 28 and 42 days after transplanting. Weed control ratings were taken at 14, 28, and 42 days after transplanting by species. The 0-100 linear scale was used, in which 0 = no crop injury /no control, and 100 = death of crop/complete weed control. For weed density: LOW = scattered, just a few weeds MEDIUM = 1 weed per 3 square feet of row; HIGH = more than 1 weed per 3 square feet of row. Due to wet field conditions plants were hand harvested on 9/30/2010. Yield results were based on 5 plants in the center of each plot. Yield data includes: total plot weight, a 30 fruit red marketable subsample, red marketable, green immature fruit, and cull fruit taken in pounds and converted to tons/acre.
